Abstract. This article examines organizational resilience within post-crisis economies, emphasizing adaptive strategic frameworks. Using a mixed-method approach, the research analyzes data from three major global economies significantly affected by recent downturns. Key findings highlight the critical role of dynamic capabilities and situational leadership in enhancing adaptive efficiency. This exploration provides insights into effective strategic planning under volatility, offering a robust model for resilience enhancement. The study's implications are vital for practitioners seeking to fortify their organizations against unprecedented economic fluctuations.

Introduction

In today's globalized economy, organizations frequently face challenges posed by turbulent markets and economic uncertainties. As we look towards 2024-2026, the ability to sustain operations and foster growth amid such instability becomes paramount. Post-crisis economies, characterized by recovery from significant downturns, present unique challenges and opportunities for organizational resilience. The concept of resilience in this context refers to a firm's capacity to endure, adapt, and thrive despite adverse conditions. Recent literature has identified the importance of adaptive strategic frameworks and dynamic capabilities as core components of resilience. This paper addresses these challenges by providing an in-depth empirical analysis of organizational resilience in post-crisis economies. By employing a mixed-method approach, this study synthesizes

quantitative data and qualitative insights to delineate key adaptive strategies. The research focuses specifically on situational leadership and strategic alignment as pivotal factors in navigating economic volatility. The structure of this paper is as follows: a literature review highlighting existing research on resilience strategies, an explanation of the mixed-methods employed in data collection and analysis, a presentation of findings with a focus on practical applications, and a discussion of the implications for policy and management practices.
