Abstract. This paper examines the intersection of climate change and economic policy, addressing the pressing need for sustainable development in mitigating environmental impacts. It explores how economies can adapt to climate-related challenges while pursuing growth. The research highlights policy innovations aimed at reducing carbon emissions and promoting renewable energy, arguing that these initiatives are crucial for long-term economic sustainability. Through comparative analysis, the paper evaluates global efforts in aligning economic growth with climate objectives, providing insights into effective policy-making strategies. As the climate crisis intensifies, this study underscores the urgency for integrated approaches to economic and environmental policy.
