Abstract. This study explores the multifaceted impacts of globalization on local economies, focusing on both positive and negative effects. By analyzing data from various countries, the paper highlights how globalization influences economic growth, employment, and income distribution at the local level. The findings suggest that while globalization can drive economic progress, it also poses challenges such as increased inequality. The paper calls for policies that mitigate these adverse effects while enhancing the benefits of globalization.

Keywords: Globalization, Local Economies, Economic Growth, Income Distribution, Policy

Introduction

Globalization has transformed local economies worldwide, generating both opportunities and challenges. This article examines the impact of globalization on local economies, considering aspects such as economic growth, employment, and income distribution. It provides an in-depth analysis of how globalization fosters economic development while simultaneously posing risks like inequality and job displacement. By drawing on case studies and empirical data, the article offers insights into the dynamics of globalization and local economic changes. The findings emphasize the need for balanced policies that harness the benefits of globalization while addressing its downsides.
