Abstract. This research investigates the morphological changes in Scandinavian languages over the past century. By examining historical texts and contemporary usage, we identify key shifts in word formation and structure. Our findings highlight the influence of external linguistic contacts and internal language evolution, contributing to a deeper understanding of Scandinavian linguistic history.

Keywords: Morphology, Scandinavian Languages, Linguistic Evolution, Language Change, Historical Linguistics

Introduction

The morphological changes in Scandinavian languages present a fascinating area of study, revealing the dynamic nature of linguistic evolution in this region. Our research examines these changes over the last century, focusing on shifts in word formation and structure. By analyzing historical texts alongside modern language usage, we identify patterns that reflect both external influences and internal developments. This study provides a comprehensive overview of how Scandinavian languages have evolved, contributing to broader discussions on language change and adaptation.
